

fact sheet...

The Key Factor in Rising Healthcare Costs:

- *On average, 15% of Plan members will consume 85% of total healthcare dollars during the Plan year*

These Costs can be Reduced:

- *10% of these members can be identified and monitored and/or managed to greatly reduce risk and improve quality over the next 12-24 months*

The D2HawkeyeExplorerSM is powered by one of the country's most innovative healthcare technology companies.

D2HawkeyeExplorerSM Reports Help Employers Lower Healthcare Costs

Rising healthcare costs are of critical concern to businesses of all sizes. Too often, self-funded employers have had to rely on inadequate, generic medical plan reports which did not provide the right information at the right time to truly manage their plans effectively. But now there's a solution: timely, actionable, plan information via the D2HawkeyeExplorerSM, a product that analyzes medical claims.

The D2HawkeyeExplorerSM integrates medical, pharmacy, eligibility, and disease-management data into one comprehensive database. This patient-centric system uses the Plan's individual claim data for analyses of service, diagnosis, procedure, or provider.

Why use claims data vs. a wellness questionnaire?

- Individual claims data provides medical utilization information on **all** Plan participants, rather than just those who fill out a questionnaire
- The data can be updated as often (monthly, quarterly, etc.) as the Plan Sponsor requires

System Features

- Delivers comprehensive and customizable medical/Rx reports
- Identifies potential high-risk members **before** high costs are incurred
- Identifies the **number** of members impacted by Plan design changes
- Identifies Rx "switch to" savings opportunities
- Identifies disease management and preventive care opportunities
- Enables PPO and individual provider cost analysis and management
- Enables auditing of medical and Rx claim payors

Benefits for Plan Sponsors

- Getting **actionable** claims utilization reports
- Preventing large claims before they occur
- Managing costs for chronic conditions
- Identifying low cost networks and providers
